Hi Shakim,

If you look at the questionnaire, facilities that say they don't have quality assurance activities (q440) skip the next two questions about documentation, so there wouldn't be a scenario where you could calculate the percentage of facilities with no regular quality assurance activities and observed documentation of quality assurance activities.

You could only calculate the % of facilities without regular quality assurance activities, or the % of facilities with regular quality assurance activities that say they don't have official documentation of those activities.

I hope that's helpful,
Sara
