Dear, thank you so much.
I am using the women file as a unit of analysis: I don't understand the long list of variables
(b11_01, b11_02, b11_03...). Can you say few words about what are the second and the third
term mean? In the women file, I see such types of variables when the question involves children
for example bord_01, bord_02...tabulating each file shows a decline in the sample size. In that
situation should I always use the first one e.g. b11_01 or bord_01 etc?

Many thanks in anticpation!
