Hello,

Thank you for taking time to help me. I am trying to get the share of the richest 10% of the schooling years.

I first tried to compare the wealth index (hv270) with the variable I created "xtile quint [weight=weight] = hv271, nq(5)"

to check if I can generate decile share using hv271 but the results of hv270 is not similar with the results of the quint variable.

Thanks again.
