Subject: Using Normalized Weight in Analysis
Posted by fehayec on Wed, 20 Oct 2021 15:24:34 GMT

Hello,

I'm doing an analysis with the cluster survey data. The normalized weight in all cluster is calculated to be 1. There is no difference in weighted and unweighted calculation. In this context, how can be analysis done? Is it a self -weighted data?

I will be thankful for your help.
