Thank you for such an insightful reply. I am analysing India's NFHS-4 2015-16 data. Here, lot of heaping is there on day-30. So, there is a chance that we might underestimate the NMR.

And if we go by the correct definition of first 28 days, then the STATA code should be ≤ 27 because we are also considering day-0 as the first day. Hence, day0 to day27 completes the first 28 days period.
