Dear DHS Team,

My research study for my MRes in Global Public Health and Policy at QMUL is to analyse malaria prevalence and its spatial distribution in Oyo State Nigeria using the 2018 DHS data. Towards this, I will need the addresses and locations of the cases in terms of their local government, enumeration areas, the clusters each falls into as well as their household locations to be able to explore malaria clustering and spatial distribution of malaria cases in the state on SPSS format. My request to your team is to make available to me cases with their individual local government, EAs, cluster and household listings with their names for identification purposes as captured by the HR, IR, KR, BR, and Biomarkers survey data (raw data). I will be grateful for your anticipated assistance and support in this regards,

Best Regards,

Adekunle Oyeleke
