Dear Sir/Madam
   I am doing DHS data analysis. According to my research, I need to use sub-national
(provincial-level) poverty rate data to verify my model's prediction which is established with DHS
survey data like AOHR71FL for Angola.
   I found that STATcompiler provide the wealth quintiles by provincial-level, I think these data
maybe can be used as verification data. I would appreciate if you could offer me more information
about provincial-level wealth quintiles in STATcompiler.

   a)Is there any document explain the method to get the wealth quintiles at provincial-level ?
   b)How do wealth quintiles calculated with DHS dataset?
   c)In SAR20 report, DHS also provide district-level data. Has DHS verified the accuracy when
sum all district-level data to provincial-level data? Does one provincial poverty rate is exactly

Would appreciate guidance in this regard.
