Dear community,

The DHS recode manual says the following about health history in some DHS surveys: "The health history contains up to six entries, relating to children born in the last three/five years."

I need to know which countries/survey years had 3 and which had 5 years of health history. I want to know the same for maternity history as well.

Is there a file somewhere where I can get this information for all countries/years?

And if no, how do I know which time frame was used for a particular dataset to collect health and maternity history?

Thank you!
