Subject: Under-5 Children data file Creation

Hi,
I am trying to create an Under 5 years of age children data file from the BDKR datafile of the Bangladesh DHS dataset 2017-18. The BDKR data set has information on mothers of children under 5 years of age, I need the information on the children, not their mothers. I realize this will require me to reshape the data somehow, keeping the individual children in the rows instead of the mothers. I would ideally like to create a children data file from the Women's Questionnaire dataset, the BDIR file. Can anyone please help me with advice on how to achieve this?
Thank you in advance
