Hi,

I started again, but still I don't find the same things as you; how did you get:

"n2: 1270.56 + 43.66 + 0.75" = 1314.97 = 1315

I tried another method, but I found 1296

```
gen livebaby=v008-b3_01
```

```
keep if livebaby < 24
```

```
tab livebaby [iw=v005/1000000]
```

My results are always different from the one obtained in the survey report.
