Following is a response from DHS Lead Nutrition Research Associate, Rukundo Benedict:

For the IYCF indicators, it is important to first select the appropriate age group. You will find the code to use to do this in the on DHS Program GitHub.

Use the !NTmain.do file, lines 98-100 to select the appropriate age group for the IYCF indicators. After you have done this, then you can run the NT_IYCF.do.
