Thanks for the follow-up response.

But since I used this "svyset v021, weight(wt2\_1) strata(v022) , singleunit(centered) || \_n, weight(wt1\_1)" to apply the survey design, I'm wondering where I'm supposed to apply this "gen wt\_1= wt1\_1\*wt2\_1". Given that I don't have "wt1\_1\*wt2\_1" anywhere in my command.
