Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

Here is the general way to resolve such issues. Go to the questionnaire and find the question that corresponds to d121. Then look at the flow of the questions from the start of the module to d121. You should find a pattern of skips and filters that led to some respondents being NA for d121. Let me know if you still can't account for the NA cases.
