Following is a response from Senior DHS Specialist, Kerry MacQuarrie:

Yes, in fact we do have Stata code available for the child marriage variables you are looking for. Check out our code repository on Github: https://github.com/DHSProgram. Look under the "DHS-Indicators-Stata" repository for Stata code and then "Chap04_MS" folder for chapter 4 marriage variables. There is a Read Me file as well as do files for all the indicators/tables in that chapter.

Please try the code there and report back if you are still having trouble matching the results. If you do, please specify which survey year and datafile you are using from the BDHS.
