Hello,

I would like to be able to get similar results (for deaths and injuries) to what is in the tables 2.18 and 2.21 for road traffic accidents and non-road traffic injuries respectively. But am not sure which database to use. For instance, the total population in both tables is 87,929 so I tried to use the UGPR7BFL file which has 91,167 observations.

But when I tabulate the variable for death related to traffic accidents (sa06) or the death related to the incident (sa17), everything is missing.
Your guidance on this will be highly appreciated.

Many thanks,
Anne
