Following is a response from DHS Lead Malaria Research Analyst, Cameron Taylor:

Dear user

Thank you for your question. Unfortunately, you can't calculate effective coverage of malaria treatment in Madagascar using MIS data alone. You would need information from the health facility via a SARA survey or information from HMIS/DHIS2.

The following reference outlines the indicators you can calculate using MIS data https:// www.malariasurveys.org/documents/Household%20Survey%20Indica tors%20for%20Malaria%20Control_FINAL%20French.pdf
