Following is response from DHS Research & Data Analysis Director, Tom Pullum:

In EGOD5AFL.dta, hpsu=hv001; hnumber=hv002; wline=hvidx

In EGOB5AFL.dta, obclust=hv001; obnumb=hv002; obline=hvidx.

I think the problem is just that you did not realize that the PSU (primary sampling unit) and cluster are one and the same.
