I am kindly requesting your help with finding missing data or observations for the following results which show that they have been reported in South Africa (2016), Lesotho (2014), and Namibia (2013) DHS final reports;

Consumption of fruits

V472K

Mother had mangoes, papayas, and other vitamins A fruits

Consumption of vegetables

V472J

Mother had any dark green leafy vegetables

Consumption of fatty foods

V472Q

Mother had oil, fats, butter, and products made from them

Consumption of meat, poultry, fish and eggs

V472n, V472g, V472h

Mother had fish, Mother had eggs, Mother had meat (Beef, pork, lamb, chicken)

I have checked all the recode files I downloaded from DHS datasets but they all have no observations. I figured l could be missing something regarding my search strategies. I would really appreciate your help.

Kind Regards

Samantha
