Subject: Query on weight variable
Posted by kmdshoyaib on Fri, 24 Jun 2022 02:00:21 GMT

I am using KR file as my master file to run analysis on Diarrhea. I am adding variables from PR file that corresponds to Water sources, Water Disposal etc. My question is can i use v005 that is Women's individual sample weight (6 decimals) for running analysis on my final spss file that would contain most of the variables from KR File and few imported variables from PR file.

Any help is really appreciated.

Thanks in advance
