Following is a response from DHS Research & Data Analysis Director, Tom Pullum:

Because the units of analysis are households, I looked for the relevant variables in the HR file. They are survey-specific variables sh73 and sh74*. You can get the table (except for recoding the states into groups) with the following commands

```
use hv005 hv024 sh73 sh74* using "....IAHR7AFL.DTA", clear

tab1 sh73 sh74*
label list SH73

gen not_public=0
replace not_public=100 if sh73>=30

local letters a b c d e x
foreach ll of local letters {
gen sh74`ll'_100=sh74`ll'*100
}

tabstat not_public sh74*_100 [fweight=hv005], statistics(mean) by(hv024) format(%6.1f)
```
