Hi,

I have downloaded all the stata files for India and I have searched for the sibling composition variable but I am unable to find it in the data provided by DHS. It would be great if someone could guide me on how to access that information. I tried search =ing for variable mm1 as mentioned in the data dictionary, however there were no results. Siblings, brother and sister search words also don't show any variable in the data.

I have tried searching it in the IR (Independent Records) file as well.
Please help me out.

Regards
Mehak Raina
