
Subject: How to add village level characteristics

I am using DHS 2015-16 and 2019-2020 rounds for studying the impact of a policy in one of the states in India. I am using a DID framework for estimating the impact. though I have been able to add number of individual level control variables but I am unable to add village level control variables. I am trying to use `i.clusternumber(v001)` to address the same issue but the regression takes a very long time to execute since there are more than 5000 clusters in my analysis. What needs to be done to address this issue? and whether cluster in DHS depicts a village or not?
