Subject: Setting up pooled DHS data as panel

I have pooled 2 rounds of data (appended) for several different countries separately and would like to set up as longitudinal data sets so that I can examine trends over time. Can you please share how DHS researchers have done this in the past using Stata? I have read about the xtset command but it would be helpful to see how this has been applied to DHS data and what steps are necessary to employ this command.

Thank you for your time.

Dan
