According to our sampling expert, Ruilin Ren, these are the variables you need to declare:

1. Number of stages: 1 (because we use linearized method, it assumes simple random sampling at summarized cluster level)
2. Primary sampling unit: MV001
3. Strata: MV022
4. Finite population correction: leave blank, it is assumed to be 0
5. Sampling weight: MV005 (may need to edit it by dividing 1000000)
