Hello,

I am having some issues in creating the variable for non-use. I think the denominator could be the problem but would appreciate your help. One of the reasons for non use if infrequent sex - which I combined v3a08b (not having sex) and v3a08b (infrequent sex), as below. Could you please help if this is the correct way of defining the variable and importantly the denominator. Thanks

*infrequent sex
gen infreqsex=0
replace infreqsex=1 if (v3a08c==1|v3a08b==1)
ta infreqsex,m
svy:ta infreqsex agebin if v213 != 1 & v312 == 0 & (v605 == 5 | v605 == 2) & v527 >= 100 & v527 <= 399 & v502 == 1,percent format(%4.2f) col
