Hello,

The code I provided uses weights, see below:

```
gen wt=hv005/1000000
```

```
tab bp_w [iw=wt]
```

```
tab bp_w if hv105<50 [iw=wt]
```

The difference in the prevalence was less than 1 percentage point and I could not identify the reason. It's not because of the weight.

Thank you.

Best,

Shireen Assaf
