Your feedback has been incredibly helpful -thank you.

I want to make sure that I am clear on the suest syntax example you provided previously. I read through the manual but wanted to quickly follow-up with you. It looks as though the data are appended with both survey rounds if you are setting each regression up with the "if survey==1" or "if survey==2" command. I had understood these would be done separately, is that correct?

Thanks again.
