Following is a response from DHS staff member Tom Pullum:

You are probably asking about the 2017 survey. The survey did not include a calendar, but did include pregnancy history, and you can use that to identify stillbirths in the past five years. Open the IR file in Stata and enter "describe s21*_01". The variables are indexed for pregnancies 01 through 20. The variable for outcome (for pregnancy 01) is s211c_01, and stillbirths have code 2. Here is the label:

```
. label list S211C_01
S211C_01:
  1 born alive
  2 born dead
  3 lost before full term
```

It is actually much easier to work with a pregnancy history than a calendar, and pregnancy histories are being added to DHS-8 surveys.
