Subject: comparing across countries in different years Posted by tina.p94 on Mon, 31 Oct 2022 10:58:49 GMT

Hi,

I was wondering that does it make sense to compare two (or more) countries with two different years of data for the same purpose? For instance, comparing Afghanistan 2015 with Albania 2017 since there isn't any mutual year of the dataset? otherwise comparing across countries is so limited
