Hi, I am having some problems with merging NFHS-5 file merging PR with KR file: Here are codes and result:

PR data

```
drop if hc60>30
```

```
rename hvidx cline
```

```
rename v001 clusterline
```

```
rename hv001 clusterline
```

```
rename hv002 hhline
```

```
rename hv024 state
```

```
rename hc60 motherline
```

```
sort cline clusterline hhline state motherline
```

```
. save "/temp
```

```
. clear
```

```
. use "KR data"
```

```
drop if b16==0
```

```
drop if b16==.
```

```
rename b16 cline
```

```
rename v001 clusterline
```

```
rename v002 hhline
```

```
rename v024 state
```

```
rename v003 motherline
```

```
sort cline clusterline hhline state motherline
```

```
. merge 1:1 cline clusterline hhline state motherline using  
"temp
```

(variable motherline was byte, now int to accommodate using data's values)

Result	Number of obs

Not matched	734
from master	727 (_merge==1)
from using	7 (_merge==2)
 Matched	 221,256 (_merge==3)

Please help.

Regards
