Hi, I am having some problems with merging NFHS-5 file merging PR with KR file: Here are codes and result:

```
PR data
drop if hc60>30
rename hvidx cline
rename v001 clusterline
rename hv001 clusterline
rename hv002 hhline
rename hv024 state
rename hc60 motherline
sort cline clusterline hhline state motherline

. save "/temp

. clear

. use "KR data"

drop if b16==0
drop if b16==.
rename b16 cline
rename v001 clusterline
rename v002 hhline
rename v024 state
rename v003 motherline
sort cline clusterline hhline state motherline
. merge 1:1 cline clusterline hhline state motherline using
"temp
(variable motherline was byte, now int to accommodate using data's values)
```

Result	Number of obs

Not matched	734
from master	727 (_merge==1)
from using	7 (_merge==2)
Matched	221,256 (_merge==3)

Please help.

Regards
