---

Hello,

I am working with Nigeria 2013 DHS.

I am trying to merge male recode with household members recode in STATA.

I followed the procedure below but STATA reported with-- variables hv001 hv002 hv003 do not uniquely identify observations in the using data---

Steps:

1. open the household member file and sort hv001 hv002 hv003 and then save this file

2. open male file and do:

```
gen hv001 = mv001
```

```
gen hv002 = mv002
```

```
gen hv003= mv003
```

```
sort hv001 hv002 hv003
```

```
merge 1:1 hv001 hv002 hv003 using "THE NAME OF THE FILE WITH SORTED HOUSEHOLD MEMBER DATA"
```

```
keep if _merge==3
```

```
save "NEW NAME"
```

Please help me out here.

Thank You.
