---

I am using the DHS datasets for the Ethiopia survey year 2016 (the recode file (ETKR71F) with the GPS dataset (ETGE71FL) and the geospatial covariate dataset (ETGC72FL) using the cluster number (hv001). I have tried to search in the forum for an answer to the following questions but I didn't find the specific answer and explanation I was looking for. I wonder if you have any suggestions:

1. How to link or match DHS clusters from 2016 with GPS files?

Also, do you know where I could find information about how to use GPS datasets (for example where it says if matching id is possible?)

2. If (1) is possible, I wonder if I could match clusters to regions.

Thank you for your help!

Kind regards,

---
