You need to use the survey weights to get the DHS report numbers. See the FAQ under "using data files"

<http://dhsprogram.com/faq.cfm>

Here is some example code for setting up the weights, and then you would want to use "svy: tab stunted" to calculate stunting rates.

Example Stata code:

```
*generate weight
```

```
generate weight = v005/1000000
```

```
*make unique strata values by region/urban-rural (label option automatically labels the results)
```

```
egen strata = group(v024 v025), label
```

```
*check results tab strata
```

```
*tell Stata the weight (using pweights for robust standard errors), cluster (psu), and strata:
```

```
svyset [pweight=weight], psu(v021) strata(strata)
```
