Hi,

I am analyzing vaccination rates from the 2016 Ethiopia DHS dataset. While reviewing the data I was planning to use the h1-h80 variables, but I noticed at the end of the data set there are variable sh1-sm508va, which also contain vaccination data. I tried to reference the questionnaire to see what questions this information correlated to, but I could not find anything. Are these variables strictly related to what was documented at a health facility? Thank you so much for your help.
