I am Yunhee, PhD student in Johns Hopkins School of Public Health.

I have been doing a situation analysis for the nutrition and health status of adolescent girls with Burkina Faso DHS STATA dataset (round6).

Then when i downloaded those dataset, it seems like that there is no variable available (e.g. hv022, v022, mv022) for sample strata for sampling errors in DHS STATA dataset of Burkina Faso.

I would like to know how and where I can get these variables, and if these are not available, then what other variables to be used instead of hv022, v022, mv022?
