Hi,

I am loading the 2015 India DHS .SAV Individual file into Rstudio. When it loads I see 32757 respondents. When I see what regions these individuals are from it says they are only from Andaman and Nicobar Islands, Andhra Pradesh, Arunachal Pradesh, and Assam but there are no individuals from any of the other regions. Is this because R Studio is not loading the full dataset or is there an issue with the data file?

Thanks
