Dear Sir/Madam

I am working on DHS data pregnancy outcomes with Waqas Hameed. Last time you responded to our query

"Table 9.16 is calculated from the calendar data, specifically vcal_6. See the questions starting with Q310 in the women's questionnaire, page 441 in the final report on this survey. The code to produce this table is in GitHub. See the CM_PMR.do file in chapter 8. Let us know if you have any difficulty"

So I followed all the commands and created the file CM_PMR, but in this file we are only getting stillbirth records. We want results for miscarriage and abortions as well with stillbirth.

Would appreciate help in this regard.

Thank you
