Thank you for your response. I really appreciate it.
I would like to ask a follow-up question. The variables I'm looking for have an n/a, including v730 (husband/partner's age) and v701 (partner/husband's education). However, the dataset does have v034 (line number of husband) and v133 (education). Maybe I could get, for instance, the husband's education level by using these two variables? Any leads would be very appreciated.
Thanks again!
