Subject: Re: All-women factor in trend analysis
Posted by Serala on Tue, 14 Mar 2023 08:32:30 GMT

Hello again,

I am now facing the same issue as before but with the BR file. I was wondering if there is a similar way of constructing a revised BR file from an ever-married sample to an all-women version? Or do I have to just restrict the analysis to ever-married women even in those survey rounds where the sample is all-women?

Best regards,
Serala
