---

Hi.  
Can someone please suggest STATA code for merging child file (12-23 months) with their mother characteristics

I am using the following code -  
use IAKR7DFL.DTA, clear  
merge m:1 (v001 v002 v003) using IAIR7DFL.dta  
keep if \_merge==3  
save IAKR7DFLNEW.DTA, replace

Just want to know if it is the correct way. Please suggest.  
Thanks
