Hi again

After I have reviewed the both views of using and not using the svy in the analysis, I think i will go with the first view; to use weight, psu, and strata.

I only faced one issue I mentioned it earlier: strata option is not allowed with "ivreg 2sls" only the sample weight and (cluster psu) is working,

Is there any way to fix this issue and get the "ivreg" result with account for "strata" option. ??? or I should accept the stata results with no strata ?

Thank you
