Hello there,

lam using the India "BR" file and would like to:

- a. compare basic vaccine coverage between periods, i.e in last 2 years and last 5 years. Which variables represents the different period(s).
- b. I have used variables h32a-h32w to compute ARI treatment coverage but my values are different from what is reported in the tables.

I assumed that a "yes" in the listed variables implied the respondent had sought appropriate treatment. Is that the right approach.

c. Have reviewed the quesitionaires for India 2015/16 but I don't find one for BR. Any pointers to the source?
