Hello,
I have appended the Jordan IR dataset in 2002, 2007, 2012 and 2017/18. The variable v101 described as region changes from 2012 and 2017/18. At first the variable takes on values 1, 2 and 3. Where 1 is central, 2 is north and 3 is south. In 2017/18 we get a 2 digit value which also starts with 1, 2 or 3. It is however followed by one of the numbers 1, 2, 3 and 4 (e.g. 11, 14, 23 etc). I have looked in both the recode manual and the final report to see if the first digit in the value of the 2017/18 set would correspond the same way as in previous one, but cannot find anything. Where could I possibly find the information about this, or is there anyone here who knows if that is the case?

Thanks
