Dear Tom Pullum,

I appreciate your opinion. I have confirmed that the mother and father education is good instrument variables for my analysis, that's why I am asking about these variables. v149 and v729 is women education and husband education data but it is not necessary that all women and men are mother and father. In v201, there are 1,950 women has no children. I need mother and father education data. Kindly help me in this matter.

Regards.
