Dear Tom Pullum,

Thanks for your reply, but I am asking about mother education data not women education data. My point is that in IR file there is v201, there are 1,950 women has 0 children, 1,983 women has 1 child, 2,305 women has 2 children, 2,376 women has 3 children and it's up to 15 children. If am I right. If women have 0 children, they are not mother. I need a data that women are mother. In IR file, V149 included of women education data and in this woman also included that they are not mother. I am agreed your point, v503 (number of unions) is 1, which it is for 98% of women in this survey. The 98% women are married but it's not necessary they have child because in IR file they also show the women has 0 child. I need mother education data.

second, I also need the variable of Marital status of women that they mentioned, not married and married. no need of the variable of woman may be widowed, remarried, etc.
