Subject: Longitudinal study Posted by e-kolarhome on Sun, 10 Aug 2014 18:03:22 GMT View Forum Message <> Reply to Message

Dear all,

I am interested in individual sexual behaviors over time in Tanzania. From reading the data (Tanzania AIS) across years, it seems that a separate sample was drawn each wave of the survey (i.e. hivclust+hivnumb+hivline does not typically repeat). Let me know if I am wrong or if there is alternative way of tracking the same persons over time.

Thanks a lot in advance!

WZ
