Subject: STATA syntax for constructing the wealth index for Tanzania 1992 DHS

Dear All,
I am trying to create the wealth index for Tanzania 1992 DHS, which does not have a wealth index data available. I would like the created index and the quantiles to be compatible with the wealth data available in the subsequent Tanzania DHS since I will be pooling data from all the available TDHS.

Has anyone ever created the index for DHS rounds were the wealth data is not available? If so, could you please share the syntax?

Thanks!
