Thank you for your reply! It was very helpful.

I have one more question.

For the variable of mother's smoking status (table 10.1 in the 2019-2020 DHS Rwanda final report) , I decided to use "v463z" only among v463a~z. Is it correct?

If not, can you advise me which recode I should use and how I can regroup or recode if needed?

Thanks!!
