Following is a response from DHS staff member, Tom Pullum:

It happens that DHS just published a very relevant further analysis report on this survey (FA144).

Users are asked to identify specific tables that they are trying to match. The title of the table, or footnotes, will identify the births to which the table refers. For example, the most recent live birth in the past two years will be births in the KR file with `bidx=1` and `hw1<24`.
